```

2.11 Flow Method

```
Maximize c^T x subject to Ax \le b, x \ge 0; with the corresponding symmetric dual problem, Minimize b^T y subject to A^T y \ge c, y \ge 0.

Maximize c^T x subject to Ax \le b; with the corresponding asymmetric dual problem, Minimize b^T y subject to A^T y = c, y \ge 0.

有源匯,有下界,最大流,無费用。
```

先從t連向s,容量設為無限大。這樣就變成了無源匯的情况。將每條有下界的邊先滿上下界的流量,然後更新盈餘量(入的流量-出的流量)。新建超級源ss和超級匯tt,若某個點u的盈餘量>0則ss--->u,容量爲u的盈餘量。否則u--->tt,容量爲u的盈餘量的相反數。如果一個點的盈餘量>0,則它是一定要流出去的,所以要從ss連向它,使它去找這些流量的出路。建完了圖以後求一遍最大流,如果從ss連出的所有邊都滿流,則有解。在得到的殘留網路(原圖)上再求一次最大流即可。
